EDUCATION

- **Ho Chi Minh University of Technology and Education (HCMUTE)** Ho Chi Minh City, Vietnam
Major: Software Engineering 2021 – 2026

SUMMARY

- **Professional experience:**
 - * Full-Stack Engineer with 2+ years of experience, specializing in Java backend along with modern frontend and mobile frameworks including Angular, ReactJS, and React Native.
 - * Full-Stack developer at FPT IS(Java SpringBoot, Angular, Microk8s, MongoDB).
 - * Progressed from Intern to Fresher, and subsequently served as a Backend Developer at EVERRISE.

TECHNICAL SKILLS

Languages: Java (Core, OOP, Multithreading), TypeScript, JavaScript, C#
Backend Frameworks: Spring Framework (Boot, MVC, Security, Data JPA)
Databases & Caching: MySQL, PostgreSQL, SQL Server, MongoDB (Query Optimization, Indexing)
Frontend & Mobile: ReactJS, Angular, React Native
DevOps, Cloud & Architecture: Microservices, Docker, Kubernetes, Jenkins, GCP, Linux
Tools & Version Control: Git, SVN

WORK EXPERIENCE

- **FPT Information System (FPT IS)** 03/2025 – Present
Fullstack Developer Ho Chi Minh City, Vietnam
 - **Project: HIE System (Health Information Exchange) – Hoan My Hospital**
 - * Developed a comprehensive healthcare platform serving multiple hospitals, including a **Mobile App** (React Native) for patients, a **Web Admin** (Angular) for hospital staff, a **Self-service Kiosk** for automated check-in, and a **HIS Integration Service** connecting with legacy hospital systems.
 - * Designed and optimized **MongoDB** collections for patient records, booking management, and carebook data; wrote **SQL Server** queries for bidirectional sync with the HIS Core system via Debezium CDC and Kafka.
 - * Built backend microservices (Spring Boot) handling appointment booking, patient profiles, kiosk device monitoring (heartbeat, online/offline status), and real-time notifications via SSE/WebSocket.
 - * Developed the **Kiosk Admin Dashboard**: real-time device status monitoring, activity logs, and alert management for all kiosk terminals across hospital branches.
 - * Containerized and deployed the system using **Docker** and **MicroK8s**; maintained 20+ independent microservices with CI/CD pipelines.
 - **Project: Self-service Kiosk Application for Binh Thanh General Hospital**
 - * Maintained and supported the self-service kiosk app, ensuring smooth patient registration and queue ticket issuance.
 - **Project: Pham Ngoc Thach University Clinic**
 - * *HOSPITAL INFORMATION SYSTEM*
 - * *Responsibilities:*

- Contributed to the core system development, focusing on modules for clinical workflows, hospital management, and patient administration.
- Designed and integrated standardized medical report templates and test result sheets in compliance with healthcare standards.
- Developed API integrations with the National Pharmacy Database for automated drug data synchronization.

• EVERRISE

08/2024 - 03/2025

• Backend Developer

- **Project: ETL-Harbest** – An ETL system processing advertising data from TikTok, X, Google Ads for Japanese clients. Includes WebAPI for OAuth2-based auth and batch processes for data extraction/export.
- Developed Java-based batch jobs to fetch and transform ad data across platforms.
- Enhanced Web API system using OAuth2 authentication.
- Diagnosed and resolved real-time system and integration issues.
- Worked closely with AWS services like S3 (object storage) and RDS (relational DB).

PERSONAL PROJECTS

• E-Banking Microservices Platform

2025 – 2026

• Personal Project – Full-Stack Developer

- Built a full-featured digital banking platform with **10 independent microservices** using Java 17, Spring Boot 3.x, Spring Cloud, and React 19 (TypeScript).
- Implemented **gRPC** for synchronous inter-service communication (auth, user, email) and **Apache Kafka** for async event streaming (transactions, notifications).
- Integrated **eKYC** via FPT AI SDK (OCR, Liveness Detection, Face Matching) and **AI Chatbot** using Google Gemini API with function calling.
- Built **real-time features**: WebSocket/STOMP for live chat and transaction updates; **multi-channel notifications** via Firebase Cloud Messaging and SMTP email (Thymeleaf templates).
- Secured the system with Spring Security, JWT (access + refresh tokens), BCrypt, and Redis-based session management.
- Containerized all services with **Docker Compose**; set up **Jenkins** CI/CD pipeline and **Prometheus + Grafana** monitoring.
- **Stack**: Java 17, Spring Boot, Spring Security, gRPC, Kafka, Redis, MySQL, React 19, TypeScript, TailwindCSS, Docker, Nginx, Eureka, Jenkins.

• Online Judge – Coding Practice Platform

2026

• Personal Project – Backend Developer

- Built an online code execution platform (similar to LeetCode) that allows users to write, compile, and run Java code with automated test case evaluation.
- Designed a **Docker-isolated execution engine**: user-submitted code is compiled and run inside a dedicated JDK container (`eclipse-temurin:21-jdk`), with automatic file cleanup after each execution – ensuring security and isolation.
- Implemented **multi-threaded processing** (Java 21) to handle concurrent compile/run requests without blocking the main thread.
- Designed challenge management with **One-to-Many test case mapping** (MySQL, Spring Data JPA); supports per-test-case pass/fail reporting.
- Integrated **GitHub OAuth2** login via Spring Security OAuth2 Authorization Server.
- **Stack**: Java 21, Spring Boot 3, Spring Security, OAuth2, Docker, MySQL, JPA/Hibernate, MapStruct, Lombok.
